Filing Description:

The purpose of this filing is to provide details of the premium rate development and the resulting proposed monthly premium rates for Individual policies which will be offered in the State of Illinois by Aetna Health Inc for effective dates of January 1, 2025 and later.

The health benefit plans included in this filing comply with all state-specific benefit requirements and rating regulations, as well as those associated with Federal Health Care Reform H.R. 3590 – the Patient Protection and Affordable Care Act (PPACA). Additionally, these health benefit plans either conform to the allowed tiers of coverage, defined as Bronze, Silver, Gold, and Platinum, or provide Catastrophic coverage as defined by PPACA and applicable regulations. Excluding the Catastrophic plans, all plans achieve an actuarial value consistent with the allowable range of deviation and the thresholds established for each tier – 60%, 70%, 80%, and 90%, respectively.

This rate filing is intended for new business effective January 1, 2025 and later that is issued off the State of Illinois Insurance Exchange.

The policy form associated with this filing are AL IVL HPOL-1A-2025-PPO-HIX 02, AL IVL HPOL-1A-2025-PPO-HIX DV 02. The form filing tracking number is AETN-134054646.

Per 156.135, the AV must be certified by a member of the American Academy of Actuaries using generally accepted actuarial principles and methodologies. There are 3 types of certification:
(1) Option 1 - Certify that the plan was entered correctly and does not vary materially from standard options entered
(2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]
(3) Option 3 - Used the calculator for provisions that fit and made adjustment for plan design features that deviate outside of calculator [156.135.(b).(3)]

The plans listed meet the criteria for Option 1 - the plans were entered correctly and do not vary materially from the standard options entered.
In addition, a 0.9999 factor is applied to the average coinsurance in row 11 for most plans. While not materially impacting the entered benefit value, this methodology prevents the OP facility/physician splitting methodology from being invoked which we do not believe is appropriate for our benefit plans. The output from this consistently-applied process reflects our certified Actuarial Values.

Certification Language:
The development of the actuarial value was determined in accordance with the ASOPs established by the ASB and with applicable laws and regulations.

This analysis was conducted by a member of the American Academy of Actuaries that meets the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States promulgated by the American Academy of Actuaries, and has the education and experience necessary to perform the work.

The certifying actuary is an employee of Aetna.

This certification supports plans offered in the Individual market.

Metal levels were appropriately assigned based on applicable law.

1) Justification for use of Issuer AV:

Per 156.135, the AV must be certified by a member of the American Academy of Actuaries using generally accepted actuarial principles and methodologies. There are 3 types of certification:

- (1) Option 1 - Certify that the plan was entered correctly and does not vary materially from standard options entered
- (2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]
- (3) Option 3 - Used the calculator for provisions that fit and made adjustment for plan design features that deviate outside of calculator [156.135.(b).(3)]

Aetna benefit plans were analyzed vs the AVC to determine when Option 2 and/or Option 3 vs Option 1 certification was necessary. Four underlying calculators were built to support population of the Mental Health OP, Specialist OV, ER, and Rx generic rows in the AVC. These all support Option 2 certifications, but only the calculators used are referenced below. A separate calculator was used for plans with True Individual Family (TIF) deductibles in support of Option 3. Again, only if the calculator was used would it be referenced below. In addition, a 0.9999 factor is applied to the average coinsurance in row 11 for most plans. While not materially impacting the entered benefit value, this methodology prevents the OP facility/physician splitting methodology from being invoked which we do not believe is appropriate for our benefit plans. The output from this consistently-applied process reflects our certified Actuarial Values.

2) Regulatory permitted alternate method used:

(2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]

3) Confirmation that only in-network cost sharing including multitier networks, was considered:

Confirmed. Only in-network cost sharing information was used.

4) Description of standardized plan population data used:

Detail of data used for each of the subcalculators is described below in items 5 & 6. All data was based on either the AVC continuance tables, or a national data set which is representative of the IFP population.

5) If the method described in 156.135.(b).(2) was used, description of how the benefits were modified to fit the parameters of the AV calculator:

MH OP Benefit Plan Fit Process

MH OP has two subcategories: MH OP - Office Visit and MH OV - All Other. The equivalent coinsurance for each was set as the plan copy divided by the unit cost. The adjusted equivalent coinsurance was then calculated for each copay/deductible combination. If there was non-uniform deductible applicability, the equivalent coinsurance was calculated that produced the same net impact as assuming both subcategories had no deductible applied. This was based on the distribution of claims cost from the AVC continuance tables, adjusted to take into account the impact of the OOP Max. The average coinsurance of the row was calculated based on the weightings of the AVC continuance tables. This coinsurance was then converted to a copay based on the average unit cost from the aforementioned continuance tables.

Rx Generic Tier 1a Fit Process

Using internal cost data, the distribution of Rx generic costs between Tier 1a and Tier 1 was determined. A weighted average adjusted copay/coins was then calculated based on this distribution and the cost share adjusted for the relative drug cost level between the tiers.
