Filing Description:

The purpose of this filing is to provide details of the premium rate development and the resulting proposed monthly premium rates for Individual policies which will be offered in the State of Illinois by Aetna Health Inc for effective dates of January 1, 2025 and later.

The health benefit plans included in this filing comply with all state-specific benefit requirements and rating regulations, as well as those associated with Federal Health Care Reform H.R. 3590 – the Patient Protection and Affordable Care Act (PPACA). Additionally, these health benefit plans either conform to the allowed tiers of coverage, defined as Bronze, Silver, Gold, and Platinum, or provide Catastrophic coverage as defined by PPACA and applicable regulations. Excluding the Catastrophic plans, all plans achieve an actuarial value consistent with the allowable range of deviation and the thresholds established for each tier – 60%, 70%, 80%, and 90%, respectively.

This rate filing is intended for new business effective January 1, 2025 and later that is issued off the State of Illinois Insurance Exchange.

The policy form associated with this filing are HI IL IVL-H-HIX-POL-1A-HMO, HI IL IVL-H-HIX-POL-1A-HMO-DV. The form filing tracking number is AETN-134065267.

**Aetna Health Inc.
Illinois Individual**

Summary

Aetna is filing 2025 premium rates for Individual plans in Illinois. The new rates will be effective as of January 1, 2025. The current membership and range of rate changes by product are:

<u>Product Name</u>	<u># Members as of March 2024</u>	<u>Range of Increases</u>
HMO	37,399	4.55%, 19.29%

Why We Need to Modify Premiums

1) Health Costs Trend

Medical costs are going up and we are changing our rates to reflect this increase. We expect medical costs to go up 6.8% excluding the effect of changing plan design features like deductibles, copays, and out-of-pocket maximums. Medical costs go up for two reasons – providers raise their prices and members get more medical care. We expect Pharmacy costs to go up 9.0% excluding the effect of changing plan design features like deductibles, copays, and out-of-pocket maximums. Pharmacy costs go up at an even higher rate as more members use more prescriptions and pharmaceutical companies increase their prices and develop new high-cost specialty drug treatments. In total, we expect combined costs to go up 7.2%.

2) Other Factors that Affect Premiums

Changes to benefit designs like deductibles, copays, and out-of-pocket maximums were made to comply with federal requirements and to make our plans more attractive to consumers. We need to change our premiums to reflect the changes made to benefit designs.

We are also updating our premiums based on claims experience. Claims experience is the dollar amount we paid to cover our share of members’ medical costs in the past.

We have updated other assumptions that impact the projected claims costs and required premiums. These include factors such as the average age/gender distribution, geographic area, and tobacco utilization.

We have updated our non-claim expenses. Our non-claim expenses represent all costs that are unrelated to claims experience, including overhead, salaries, services to aid our members, and taxes. Non-claim expenses have been updated to reflect most recent administrative expense, profit, and taxes/fees.

Will Premiums for Individuals Change the Same?

No, actual rate changes can vary greatly by individual. The exact rate change depends on where the plan the individual has selected and where the individual is located, as well as tobacco status.

How does this request align to Minimum Loss Ratio Requirements (MLR)?

Under the ACA, at least 75% of the premiums collected by a health plan should be used to pay for the medical costs of the members of that health plan. This is referred to as the Minimum Loss Ratio (MLR). These rates are expected to meet the 75% requirement for individual business. If less than 75% of the premiums collected by the health plan are used for paying medical costs, rebates will be issued to members of the health plan in accordance with the law.

Aetna makes significant investments that benefit our members that cannot be factored into this calculation. These investments include customer service, health quality activities like disease management programs, and the development of new information technologies.

What is Aetna doing to keep premiums affordable?

Aetna is taking several steps to keep our products as affordable as possible and to address the underlying cost of health care. These actions include:

- Developing new agreements, arrangements, and partnerships with health care providers
- Creating programs that address potential health issues for members earlier, improving health outcomes and reducing the need for high-cost health care services
- Working to reduce the ability of out-of-network providers to collect unreasonably excessive payments for services they provide.

Historical Loss Ratio

The table below shows actual claims 2023, expressed as a percentage of total premium less risk transfer.

Year	Claims / (Total Premium Less Risk Transfer)
2023	79.30%

Per 156.135, the AV must be certified by a member of the American Academy of Actuaries using generally accepted actuarial principles and methodologies. There are 3 types of certification:
(1) Option 1 - Certify that the plan was entered correctly and does not vary materially from standard options entered
(2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]
(3) Option 3 - Used the calculator for provisions that fit and made adjustment for plan design features that deviate outside of calculator [156.135.(b).(3)]

The plans listed meet the criteria for Option 1 - the plans were entered correctly and do not vary materially from the standard options entered.
In addition, a 0.9999 factor is applied to the average coinsurance in row 11 for most plans. While not materially impacting the entered benefit value, this methodology prevents the OP facility/physician splitting methodology from being invoked which we do not believe is appropriate for our benefit plans. The output from this consistently-applied process reflects our certified Actuarial Values.

Certification Language:
The development of the actuarial value was determined in accordance with the ASOPs established by the ASB and with applicable laws and regulations.

This analysis was conducted by a member of the American Academy of Actuaries that meets the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States promulgated by the American Academy of Actuaries, and has the education and experience necessary to perform the work.

The certifying actuary is an employee of Aetna.

This certification supports plans offered in the Individual market.

Metal levels were appropriately assigned based on applicable law.

1) Justification for use of Issuer AV:

Per 156.135, the AV must be certified by a member of the American Academy of Actuaries using generally accepted actuarial principles and methodologies. There are 3 types of certification:

- (1) Option 1 - Certify that the plan was entered correctly and does not vary materially from standard options entered
- (2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]
- (3) Option 3 - Used the calculator for provisions that fit and made adjustment for plan design features that deviate outside of calculator [156.135.(b).(3)]

Aetna benefit plans were analyzed vs the AVC to determine when Option 2 and/or Option 3 vs Option 1 certification was necessary. Four underlying calculators were built to support population of the Mental Health OP, Specialist OV, ER, and Rx generic rows in the AVC. These all support Option 2 certifications, but only the calculators used are referenced below. A separate calculator was used for plans with True Individual Family (TIF) deductibles in support of Option 3. Again, only if the calculator was used would it be referenced below. In addition, a 0.9999 factor is applied to the average coinsurance in row 11 for most plans. While not materially impacting the entered benefit value, this methodology prevents the OP facility/physician splitting methodology from being invoked which we do not believe is appropriate for our benefit plans. The output from this consistently-applied process reflects our certified Actuarial Values.

2) Regulatory permitted alternate method used:

(2) Option 2 - Certify that entries into the calculator were modified to reflect the plan appropriately [156.135.(b).(2)]

3) Confirmation that only in-network cost sharing including multitier networks, was considered:

Confirmed. Only in-network cost sharing information was used.

4) Description of standardized plan population data used:

Detail of data used for each of the subcalculators is described below in items 5 & 6. All data was based on either the AVC continuance tables, or a national data set which is representative of the IFP population.

5) If the method described in 156.135.(b).(2) was used, description of how the benefits were modified to fit the parameters of the AV calculator:

MH OP Benefit Plan Fit Process

MH OP has two subcategories: MH OP - Office Visit and MH OV - All Other. The equivalent coinsurance for each was set as the plan copy divided by the unit cost. The adjusted equivalent coinsurance was then calculated for each copay/deductible combination. If there was non-uniform deductible applicability, the equivalent coinsurance was calculated that produced the same net impact as assuming both subcategories had no deductible applied. This was based on the distribution of claims cost from the AVC continuance tables, adjusted to take into account the impact of the OOP Max. The average coinsurance of the row was calculated based on the weightings of the AVC continuance tables. This coinsurance was then converted to a copy based on the average unit cost from the aforementioned continuance tables.

Rx Generic Tier 1a Fit Process

Using internal cost data, the distribution of Rx generic costs between Tier1a and Tier1 was determined. A weighted average adjusted copay/coins was then calculated based on this distribution and the cost share adjusted for the relative drug cost level between the tiers.
